Attention Accord plan

CS110 / INDEPENDENCE ROAD

mission

We are going to convert the Bounty Hunting App into a game where the player will actually hunt for the criminals.

framework

We chose P2P.

We put everything in order and used Claude Ai to give us the answers

tech

Engine: Unity. It s free, lightweight, and has good beginner tutorials, so everyone can install it and start quickly.

Language: Unity C#. It s built into Godot and easy to read, so teammates can understand each other s code.

Packages/add-ons: Godot s built-in 2D/3D tools (sprites, collision, UI nodes) so we don t depend on extra downloads that might break.

Assets: Free, license-friendly art and sound (for example from Kenney.nl or OpenGameArt), plus our own wanted-poster designs made in Canva or Figma. We chose free assets so we don t have copyright problems.

Who checks them:

[Leah Aluni] checks that the engine and code run on every team member s computer.

[Nicolas Kuhnast] checks that every asset has a license that lets us use it.

[George Arbache] tests the finished build after each change.

Why we chose these: They re free, beginner-friendly, and work well for a small team with limited time. Open question: Do we need any extra add-ons for saving scores, or is the built-in system enough? I used Claude to get the answer

Time code

Start / Update

Callback | What happens | Verified

Awake() | Sets up references (player, bounty list) before the game starts | [x]

Start() | Loads the first bounty and sets the score to 0 | [x]

Update() | Every frame: reads player input, moves the player, checks if the bounty is caught | [x]

OnCollisionEnter2D() | Runs when the player touches a bounty target, then adds the reward to the score | [x]

CS110 / INDEPENDENCE ROAD

Classes & components

Class | Responsibility | GameObject

PlayerController | Reads input and moves the player; checks when the player touches a bounty | Player

BountyTarget | Stores each target s name, difficulty, and reward value | Bounty (prefab)

GameManager | Tracks the score and which bounty is active; decides when the game ends | GameManager (empty object)

UIManager | Updates the score text and shows the win or game over screen | Canvas

Packages / using

Package / namespace | Why included | Tested

using UnityEngine; | Gives access to the core engine tools our scripts need, like MonoBehaviour, Transform, Input, and Vector2 | [x]

using UnityEngine.UI; | Lets us update the score text and buttons on the screen from code | [x]

using System.Collections.Generic; | Lets us use List<> to store the bounty list and loop through it | [x]

using UnityEngine.SceneManagement; | Lets us reload the scene when the player restarts after winning or losing | [x]

reuse

PlayerController script (our own code). Source: written by our team. Credit: none required, but we ll keep our names in the code comments.

GameManager and score system (our own code). Source: written by our team. Credit: none required. It can be reused for any game that tracks points or objectives.

Bounty data structure (BountyTarget class). Source: our team. Credit: none required. We can swap in new characters, rewards, and difficulty levels for a new story.

Free art and sound assets (for example from Kenney.nl or OpenGameArt). Source: the website and creator s name, saved in a credits file. Credit: we ll check each license, since some (CC0) need no credit and others (CC-BY) require us to name the creator.

Our wanted-poster and menu designs (Canva or Figma). Source: our team. Credit: if we used Canva templates or stock elements, we ll check Canva s license terms before reusing them. I used Claude for my answer.

boardNotes

What the huddle board is: A shared space where our team writes down what we discussed, what we agreed on, and what we still need to figure out, so nobody has to rely on memory and everyone can see the same plan.

Decisions we made:

We will build the game in [Godot/Unity] using [GDScript/C#], because it s free and beginner-friendly.

We will keep the game small: at least 3 bounties, a score system, and a win or game over screen.

We will use free, license-friendly assets and keep a credits file listing each source.

CS110 / INDEPENDENCE ROAD

Each person owns one part of the pipeline: [Name 1] inputs, [Name 2] building, [Name 3] design, [Name 4] testing.

Disagreements:

Some of us wanted more bounties and extra levels, while others wanted to finish a smaller game that works. We agreed to finish 3 bounties first and add more only if time is left.
We discussed whether to draw our own art or use free assets. We chose free assets for the characters and made our own wanted posters.

Questions that remain open:

Do we need an extra add-on to save high scores, or is the built-in system enough?
Who will double-check that every asset s license allows us to reuse it?
How many classmates can test the game before the deadline? I used Claude to get the answers

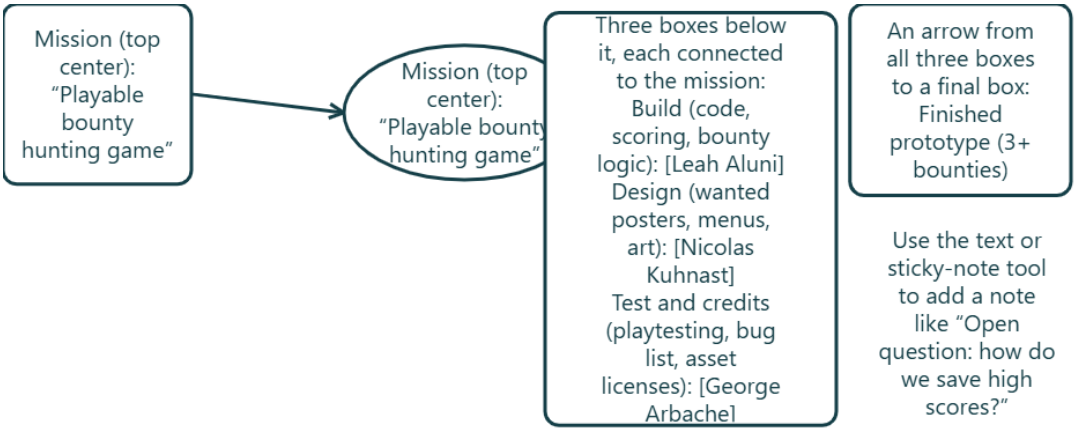

Whiteboard

Our mission is to build a playable bounty hunting game with at least three bounties, a score system, and a win or game over screen. In our huddle we compared our ideas for the mission and agreed to keep the game small so we can finish it.

The diagram shows the mission at the top, connected to three jobs. [Name 1] builds the game and scoring. [Name 2] designs the posters, menus, and art. [Name 3] tests the game, keeps the bug list, and checks that every asset s license lets us use it. All three jobs lead to the finished prototype at the bottom.

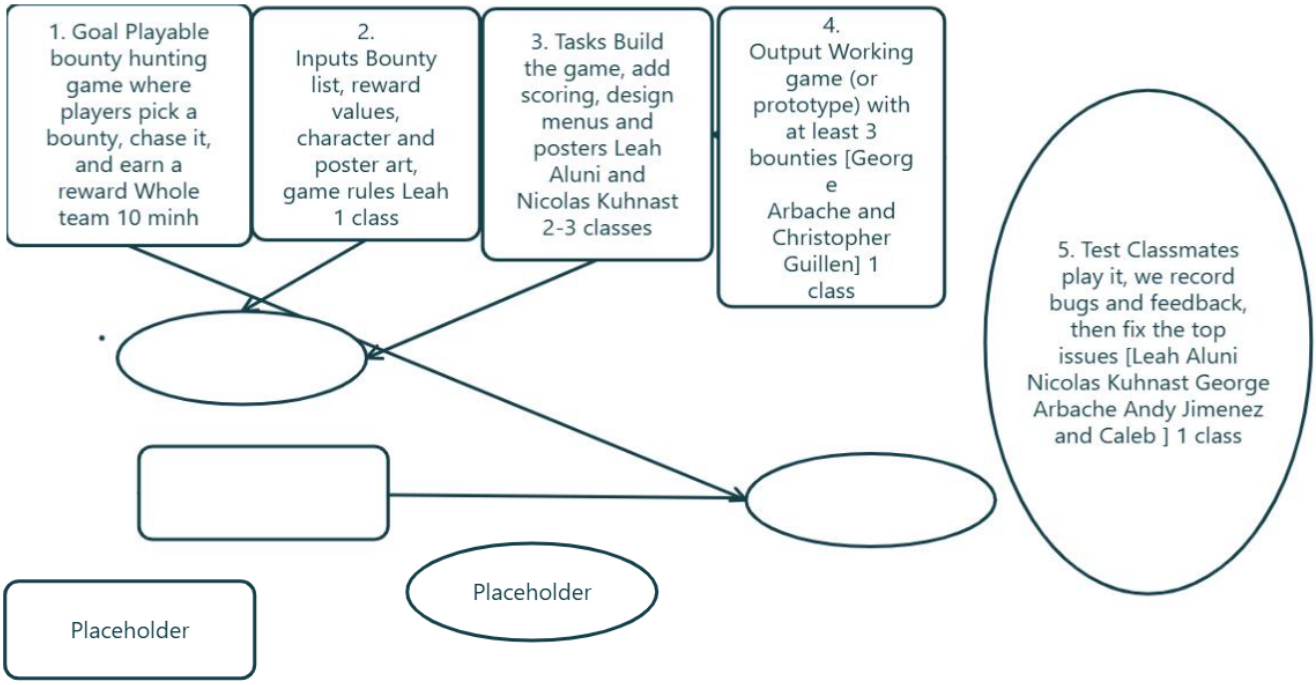

We decided that each person owns one job so nothing is missed, and that we will check in again before the deadline. One disagreement was whether to add more bounties or finish a smaller game first, and we chose to finish three bounties first. One open question is how we will save high scores. we used claude to get the answers
